

Guide to Fukuoka City's Facility Visit and Training Programs

About Fukuoka City

Fukuoka City has developed as a base for international trade to continental Asia and beyond. Today, Fukuoka continues to grow as the hub of the western Japan, with the establishment of a United Nations agency, as well as national government organizations, branches of major corporations, foreign diplomatic missions, and financial and service businesses.

In addition, Fukuoka Airport, major conference venues, and the downtown area are all located within a 2.5 km radius, and shrines, temples, seaside resorts, and state-of-the-art shopping facilities are compactly located in the urban heart of Fukuoka. Fukuoka is a captivating city that is perfectly harmonized with Japanese traditions and contemporary culture.

 Four cities marked with blue box in the map hold sister city agreement with Fukuoka city.

[Area] 343 km²

[Population] About 1.66million

[Mayor] TAKASHIMA Soichiro

[Average annual temperature] 19.0°C

Program Overview

With the input of many residents, Fukuoka City created the Fukuoka City Comprehensive Plan, a document laying out the city’s three strategic visions; ‘to create a virtuous cycle that balances improving residents’ quality of life and urban growth’, ‘to provide an environment where various talents grow, gather and challenge’, and ‘to develop the Fukuoka metropolitan area as a whole and play a wide-area role’. The city is aiming to become the leading city in Asia and has been promoting urban development that achieves high level of harmony among people, the environment and urban vitality.

While Japan has been experiencing the nationwide population decline in the society, the population in Fukuoka City has been increasing due to transfer of diverse talents from other cities in Japan and abroad. Thus locating and establishment of companies also increased with Fukuoka city’s municipal tax revenues remain high. As a result, more than 97% of Fukuoka residents praise the city for its vibrancy and livability.

To introduce these engagements by Fukuoka city abroad, we offer site visit and online lecture programs focused on the following fields; Urban landscapes, Welfare, Water resources, Environment, Disaster management.

[Examples of training and onsite facility visits]

Field	Welfare
Type of organization	public service corporation
No. of attendees	30

Field	Disaster Management
Type of organization	International organization
No. of attendees	14

Field	Water Resources
Type of organization	Government body
No. of attendees	12

At the **Fukuoka Dementia Friendly Center**, visitors experienced the Dementia augmented reality (AR) Experience which enable the participants to experience elements of common visual symptoms of dementia, after the learning session on Humanity® Course and Dementia-friendly design.

The participants visited **the Sanno Rainwater Regulating Pond** which is one of the main facilities built as part of the Storm Water Management Rainbow Plan Hakata. An official from the Road and Sewerage Bureau presented an overview of the area as well as explained the city’s measures against flood damage.

At the **Tatara Purification Plant**, an official from the Fukuoka City Waterworks Bureau gave a presentation on the plant’s water treatment process, followed by a tour of its advanced water treatment facility, designed to deal with the characteristics of the plant’s water source.

Urban Development

Please consult separately for the visits and programs for the following categories.
Please see page 5 for the contact detail.

Urban Landscapes

Urban development with city design in mind

Fukuoka is a city developing itself with attention to design. The urban development projects in the city not only utilize its historical resources to their full potential, but we also combine the strengths of residents, businesses, and the government. The Island City, newly created by land reclamation, promotes environmentally friendly urban development, while giving due consideration to the urban landscape.

Welfare

Dementia Friendly City Project

Fukuoka City promotes the policy 'Dementia-friendly City Project' to aim to develop as a city where people with dementia can live as they like in their familiar neighborhoods with peace of mind. In September 2023, the city established 'Dementia Friendly Center' which is a centralized facility for the city's policy. The Center organizes the opportunity for patients to interact each others, their activities, the program for 'Humanitude®'; communication and care method for Dementia patients and Dementia AR Experience session in addition to consultation with the patients and their family members.

The city has been promoting the wide spread of the learning courses for the community, companies and school children in the city, as well as engaging to introduce Humanitude abroad.

Urban Development

Chubu Water Treatment Center

Water Distribution Control Center

Water Resources

City with water conservation

The city promotes using water reclaimed from treated wastewater to create a water-conservative environment. In addition, the city maintains the world's lowest leakage rate through systematic leakage surveys, renewal of distribution pipes, and efficient water operations using a water distribution control system. Furthermore, in order to deliver safe and delicious tap water, we have also set our own quality targets that are actually stricter than Japan's national standards, ensuring thorough quality management.

Rinkai Incineration Plant

Practical Training of Fukuoka Method

Environment

Environmentally-friendly development

Fukuoka City ensures proper management of waste disposal by enforcing measures on unlawful dumping, efficient waste collection during the night and maintaining disposal plants. The city also encourages international cooperation and supports other regions as a wider activity to introduce Fukuoka's own original environmental technology centered on the Fukuoka Method, semi-aerobic landfill technique.

Disaster Response Headquarters

Disaster Management

Creating a safe and secure city

To cope with natural disasters, which are occurring more frequently and intensely in recent years, the city strives to strengthen the functions of the newly established Disaster Response Headquarters by conducting training and workshops with the related departments throughout Fukuoka City. The city also holds evacuation drills and lectures related to disaster management and mitigation, which are popular among its citizens, as well as seminars on fire management of fire and disaster mitigation.

Education for disaster prevention and mitigation
